Beautiful. Durable. Affordable.

“Beautiful Steel Buildings” **With PWS, That’s Not a Contradiction**

California steel buildings greatly improved when PWS opened its steel building manufacturing and construction business in 1996. For over 19 years, PWS has been dedicated to building beautiful, affordable steel buildings that would meet or exceed every customer’s expectations.

We know that our success is derived from the complete satisfaction of our valued customers. No matter how much better our buildings might be in the abstract, it only makes a difference when a specific customer gets the exact building they want at a good price. That’s why our process is designed to listen to customers from beginning to end. And it’s why our customers are fans of PWS!

Our unique 4-step building process and strong, galvanized tubular steel materials were chosen to achieve our corporate goal of providing a custom quality alternative to traditional red iron or stickbuilt construction at a very competitive cost. PWS is not a typical steel building contractor that provides the same basic building to every client with a “that’s not my job” attitude. We believe that every part of the building process is our responsibility, and we are dedicated to getting all of them done right.

Barns & RV Garages

Steel RV barns and utility buildings illustrate some of the customization options available with PWS steel buildings. These barns show how height, width and depth can vary, with doors, windows, and roof mounted skylights or solar used in whatever way the owner wants.

Steel Garages

PWS steel garages are available in literally any size and shape you want. And dozens of color combinations, too. You can choose a simple, single purpose building of any size, or you can add workshop or office space within the structure, easily built to spec for your work or play purposes.

Strength. Design. Flexibility.

Commercial & Industrial Buildings

Commercial and industrial businesses and steel buildings are made for each other. PWS buildings are visually attractive, you can design the size, and shape building you want at a very attractive price point.

City - County - State

PWS has a long track record with public agencies, because we deliver the goods. PWS steel buildings are a perfect option when a public highway, equipment yard, station, storage, or other working building is needed. Get the building or equipment shelter that matches your specs perfectly, delivered on time, and on budget.

Custom Steel Workshops & Studios

Every person and every family would like to have a little extra space at some point. For some, it's a working office away from the hubbub of the home, and for others it is a place for a space-consuming hobby. PWS can build a workshop or office, with or without an attached garage, to fit any budget and match any plans. Make the exterior as attractive as you want, with colors, windows, and doors beautifully trimmed, and the interior can feel exactly like home.

Comfortable Steel Guest Quarters

It would be really nice to have a place where Mom could have some privacy and all the comforts of home. An attractive steel building from PWS can provide the cozy guest quarters you need at a low price, and with an interior that is as comfortable and functional as any other room in your house. If you need to be very practical, add an extra garage or storage or workshop area to the building. With PWS, the alternatives are limited only by your imagination.

Steel Farm Buildings

PWS steel farm buildings provide design flexibility to fit your operation to a 'T'. At the same time, these buildings will work almost as hard as you do, and they are built to last.

Steel Winery Buildings

Wineries are built on specialized farming operations, and they need specially designed, durable buildings. That's why more and more wineries are choosing steel buildings from PWS. They are attractive enough to complement wine country, and tough enough to stand up to the work that goes into making good wine.

Steel Equipment Shelters & Sheds

Trucks, cars and equipment are expensive. When not in use, it is best to shelter them from corrosive elements like sun and rain. Shelters also make working with equipment easier in the loading and unloading. PWS steel equipment shelters can be made to any size and workflow, from very small to very, very large.

PWS Premium Canopies

The PWS Premium Canopy is an outdoor multipurpose structure made to endure most climates to protect your prized possessions, all while providing elegant style designed to accent your home or property. The uses for this canopy are endless. You can use your Premium Canopy as a carport to protect your vehicle, boat, ATV, or RV from rain, snow, sun, and hail.

We do it all!

- Less expensive than other forms of construction
- Termite & fire resistant
- Engineered to meet wind & snow loads for all areas

Materials & Colors

Choose Colors in Any Combination

Match the colors of your PWS steel building to other buildings on your property, or make it stand out. Whichever steel building or trim colors you choose, you can rest assured that they will retain their original luster for years to come.

The main color of the building can contrast with the trim color or colors. Doors have different color options, which can also be mixed and matched in a building.

Steel Doors

PWS Steel Doors

PWS uses only the best quality steel doors, and they are available in every size and shape, with several colors available.

Garage doors are available in five standard colors (seen below) or can be painted to match your home's décor.

Your building may be a simple one with just one garage door for entry, or you may build a commercial structure with multiple bays and a door for each. Most of these doors can be trimmed with windows, or have a special look to resemble traditional wood framing and trim. Almost certainly, you will find a combination to match your building and your taste.

We have steel doors of several kinds:

- Entry doors in single or double width, with a variety of window treatments.
- Garage doors in single or double width, with standard overhead function.
- Rollup doors in silver or white, which save overhead ceiling space.

Windows

Garage Doors Windows

Windows can be added in almost every combination to make your PWS steel building as bright or as private as you want it. The top quality steel garage doors used by PWS can be customized with a wide variety of window styles to match your other properties, or just to give the kind of flair you prefer. Window trim is available on either single or double overhead doors.

Windows for Light and Air

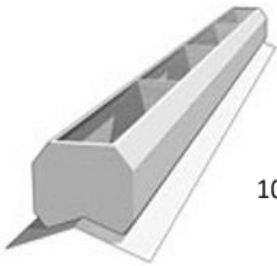

We can add windows in many variations. If you don't see what you want here, remember this is just a sample. Tell us what you want, and chances are good we can find it and fit it.

Vents & Insulation

Vents

PWS steel building vents are top quality, weatherproof and efficient. They provide a low-cost, passive way to ventilate your steel building, helping to keep the interior fresh and cool without needing power.

10 ft. Continuous Ridge Vents

Insulation

With PWS tubular steel construction, the 4 or 5 foot centers make it easy to install standard types of insulation. Insulation provides a lot of benefits: better heating and cooling management for greater comfort, a quieter interior.

Cupolas & Weathervanes

Cupolas & Weathervanes

You can choose from any colors you want and a dozen different weathervane designs. Below are 4 of the twelve weathervane options you might choose:

Horse

Rooster

Eagle

Country Doctor
